1. IDEATION

1.1 Problem Identification

In many organizations, IT support teams receive a large number of tickets every day. Manually checking each ticket, identifying its category, and assigning it to the correct team takes time and may lead to delays or incorrect assignments.

The proposed project, **“Auto Ticket Classification Using Flow Designer,”** aims to automate the classification of support tickets using **ServiceNow Flow Designer**.

When a ticket is created, the system analyzes the ticket information and automatically identifies the appropriate category and assignment group based on predefined conditions. This reduces manual work and improves ticket handling efficiency.

Main Objectives

- Automatically classify incoming tickets.
 - Reduce manual ticket processing.
 - Assign tickets to the appropriate team.
 - Improve ticket resolution time.
 - Reduce human errors.
 - Provide a consistent ticket-management process.
-

1.2 EMPATHY MAP CANVAS

The Empathy Map helps us understand the problems and needs of the people who use the ticket-management system.

User: IT Support Team / Service Desk Agent

Section Details

Says “I receive too many tickets every day.”

Thinks “Manually classifying every ticket takes a lot of time.”

Does Checks ticket details, identifies the issue, selects the category and assigns the ticket.

Feels Stressed when there are many tickets and frustrated when tickets are incorrectly assigned.

Pains Manual classification, incorrect assignment, delays and repetitive work.

Gains Automatic classification, faster assignment, reduced workload and better ticket management.

User Needs

1. Simple ticket creation process.
2. Automatic ticket categorization.
3. Correct assignment to the responsible team.
4. Faster ticket processing.
5. Reduced manual effort.

1.3 BRAINSTORMING

The team conducted brainstorming to identify possible solutions for the ticket-classification problem.

Ideas Generated

1. Manual ticket classification.
2. Rule-based automatic classification.
3. Keyword-based ticket classification.
4. Automatic assignment based on category.
5. Flow Designer-based automation.
6. Email-based ticket classification.
7. AI-based ticket classification.

8. Automatic priority detection.
9. Automatic notification to the assigned team.
10. Dashboard for monitoring classified tickets.

Selected Idea

After brainstorming, the team selected:

“Auto Ticket Classification Using Flow Designer”

The system uses **ServiceNow Flow Designer** to automate ticket classification and assignment according to predefined rules and conditions.

1.4 IDEATION PRIORITIZATION TEMPLATE

The generated ideas were prioritized based on **impact, feasibility, cost, and implementation difficulty**.

Idea	Impact	Feasibility	Priority
Manual Classification	Low	High	Low
Keyword-Based Classification	High	High	High
Automatic Assignment	High	High	High
Flow Designer Automation	Very High	High	Very High
AI-Based Classification	Very High	Medium	Medium
Automatic Notification	Medium	High	High
Priority Detection	High	Medium	Medium
Monitoring Dashboard	Medium	High	Medium

Final Prioritized Solution

The team prioritized **Flow Designer automation with rule-based ticket classification and automatic assignment** because it is practical, easy to implement in ServiceNow, reduces manual work, and can improve the speed and consistency of ticket handling.

Expected Outcome

The proposed solution will automatically process newly created tickets, classify them based on predefined conditions, and route them to the appropriate assignment group..
